CARE COORDINATION

Reducing sepsis mortality through early recognition and treatment

Our Care Team reduced the tele-ICU sepsis mortality rate from 18% to 2% in 2017 by applying a standardized approach to care for patients with sepsis including:

- ▶ Utilizing evidence-based practices
- ▶ Enhancing nursing's role in early identification
- ▶ Initiating protocols
- ▶ Providing medical management
- ▶ Enhancing communication among the team

Patient, Family & Community Impact

**Improves communication
between patient and
care team**

**Reduces the need for
invasive care**

**Improves
quality of care**

Saving Lives, Saving Dollars

Launch date: August 2017
